

Asseco BooX - "Your Bank, Out of the Box"

Marketing campaign brief & communication policy

Asseco Poland S.A. - Campaign code ACP-BOOX-2026 - Version 1.0 Runs 15 September 2026 - 31 January 2027 - Poland, Czechia, Slovakia, Romania, Serbia

The idea in one paragraph

Banks take about two years to launch a new product, because every launch turns into a software programme. Asseco BooX is a banking platform where the products are already built - you switch them on and configure them instead of building them. So the whole campaign says one simple thing: **your bank's next product should take months, not years, and you should not have to replace your core system to get it.** Everything below is the detailed plan for saying that.

1. About Asseco

The Asseco Group is present everywhere where technology and business impact everyday life. We are a federation of companies which operate worldwide, led by Asseco Poland - one of the first startups established in Poland, today the largest IT company in Central and Eastern Europe and a member of the WIG30 index.

Our systems are used by banks, energy and telecommunication companies, the public sector and the health care service. Software from the Asseco Group runs in more than half of the banks operating in Poland. We know that we cannot fail and we take full responsibility for the projects that we implement. In this way, we have been building the trust in Asseco and its value for many years.

We have been constantly improving our competencies and investing in research and development, because the most important thing for us is the success of our customers. That approach has made us the market leader in Poland, Israel, South-Eastern Europe and Central Europe.

Tagline: *Technology for business, solutions for people.*

2. The product we are promoting

Asseco BooX ("Bank out of the Box") is a ready-made platform for selling and servicing banking products. Onboarding, loans, deposits, cards, servicing and collections are already built into it, so a bank configures a new product instead of writing one from scratch.

- It can be the foundation of a completely new bank, or a modern layer on top of the core system a bank already has.
- It runs on-premise, in the cloud, or hybrid - the bank chooses.
- It is sold by subscription, or by classic licence.

Where it sits next to the rest of our banking portfolio:

Product	What it does
def3000/suite	Core banking for large commercial banks
def2500/suite	Core banking for cooperative and smaller banks
Asseco BooX	The product platform on top - new build or modernisation
Customer Banking Platform	The customer-facing sales and service channels

The three things we are allowed to claim

1. **Launch a working product in months, not years** - the processes ship with the platform.
2. **Modernise without replacing your core** - BooX wraps what you already run, so you move product by product instead of betting the bank on one cutover.
3. **Subscription pricing, Asseco accountability** - pay as you grow, from the vendor that already runs more than half of Polish banking.

What we must never claim

- No client names without that client's written approval. Existing def3000 references are **not** cleared for BooX creative.
- No invented numbers ("40% cheaper", "6-week go-live"). The approved phrasing is "months, not years".
- No competitor named. Ever. Not Temenos, not Mambu, not Thought Machine, not anyone.
- No "AI-powered" in the headline. AI is mentioned only in feature copy, only where it actually exists.
- Never imply BooX is free or open source.

3. What the campaign is for

Change how banks see Asseco: from "the old core-banking vendor our IT department already knows" to "the platform partner we would choose for a new digital product".

Goal	How we measure it	Target
Awareness of BooX as its own product	Aided recall among CEE banking decision-makers	18% -> 35%
Sales pipeline	Qualified opportunities from Tier-2/Tier-3 banks	60
Perception	Positive or neutral sentiment in professional discussion	at least 70%
Technical credibility	Registrations on the API documentation portal	1,200

4. Who we are talking to

Bank executives - the people who sign. CEO, COO, CFO, Chief Digital Officer at mid-sized banks. Age 42-60. Squeezed between regulators on one side and fintechs taking their under-35 customers on the other. Cautious by job description, and personally accountable if a big IT programme fails. They are buying certainty, not features.

IT leaders and architects - the people who can kill the deal. Head of IT, Chief Architect, Head of Digital Channels. Age 33-50. Most have survived at least one painful vendor migration. They are sceptical of "out of the box" because they assume it means rigid and impossible to customise. They will go looking for the API documentation before they answer a sales email. This group decides whether the campaign looks credible or looks like marketing.

Trade press and industry watchers. Not buyers, but they set the tone: Puls Biznesu, Cashless.pl, Bankier.pl, Finextra, The Banker. Also the regulator's sensitivity around cloud in banking - any cloud message has to look compliance-aware.

Software engineers in Poland, Czechia and Romania. We compete for them against product companies, so the campaign must not make Asseco look like a legacy shop.

The objections we know are coming

- "Asseco is a legacy dinosaur - this is old software with a new front-end."
- "Out of the box means we cannot differentiate; our bank will look like everyone else's."
- "Cloud core banking will never clear our regulator, so the subscription model is theatre."
- "Vendor lock-in - once our processes are their processes, we can never leave."
- "A Polish vendor cannot support us at the same level in Romania or Serbia."
- "We have seen the headlines about big public-sector IT projects."

The campaign is designed to survive these in public, not to avoid them.

5. The message

Main message:

*Your bank's next product does not need a two-year programme. It needs a platform that already knows how banking works. **Asseco BooX - your bank, out of the box.***

Said differently for each audience:

Audience	Message
Executives	"Launch the product this year. Keep the core you already trust."
Architects	"Configuration, not forks. Documented APIs, your deployment model, your data."
Press and regulators	"Built in Poland, for European supervision - cloud, hybrid or on-premise."
Engineers	"We build the systems half of Polish banking runs on. Come build the next one."

Tone of voice: confident, plain, unhyped. Asseco does not shout. We are the vendor you call when failure is not an option. No startup vocabulary - no "disrupt", no "game-changer", no "revolution". And no apologising for our size or our history; the scale is the proof.

6. Channels and what goes on them

Channel	Budget share	What we do there
LinkedIn	40%	Launch posts, paid targeting by job title, executives posting in their own voice
Trade press & analysts	20%	Embargoed launch, Celent and Forrester briefings, one case study
Events	15%	Impact'26 Poznań, Money20/20 Europe, round-tables in Warsaw, Prague, Bucharest
X / Twitter	15%	Short technical threads aimed at architects, in English
Reddit & communities	10%	One announced AMA with the BooX chief architect

LinkedIn launch post (approved):

Twelve months to launch a new savings product. That is the average in CEE retail banking. We think that number should be a lot smaller. Asseco BooX ships with the processes already built - onboarding, lending, deposits, cards, servicing - so your team configures a product instead of running a programme. Keep your core. Choose your deployment: cloud, hybrid, or your own data centre. Your bank, out of the box.

X post (approved):

"Out of the box" usually means "you will be fighting it by month three". So we published the process library and the API docs before the sales deck. Asseco BooX - configure the product, keep your core, pick your deployment. Read the docs first, talk to us second. #corebanking #fintech

On Reddit and developer communities, the rule is strict: anyone from Asseco who joins a discussion says in the comment that they work for Asseco. No agency accounts, no paid or incentivised posts, no pretending to be a customer. We expect this to be the most hostile channel and the most useful one, because the architect audience actually lives there.

7. Timeline

Phase	Dates	What happens
1 - Tease	15-30 Sep 2026	Talk about the problem - the two-year product programme. Product not named yet.
2 - Launch	1-20 Oct 2026	BooX revealed, documentation portal goes live, press embargo lifts
3 - Proof	21 Oct - 15 Dec 2026	Technical content, the AMA, the customer case study, round-tables
4 - Convert	16 Dec 2026 - 31 Jan 2027	Retargeting and pipeline follow-up into the Q1 budget cycle

8. Communication policy

The standing rules:

1. Every public claim must be traceable to a signed document. Marketing does not invent numbers.
2. Client names appear only with that client's written approval, case by case.
3. No competitor is ever named in Asseco creative.
4. Employees taking part in public discussion disclose that they work for Asseco.
5. Anything touching regulation or compliance is cleared by Legal before publication.
6. Prospect data is handled under GDPR. No scraped contact lists.

Answers we have pre-approved:

- On "you are legacy": "def3000 is running in production in more than half of Polish banking today. BooX is what we built for the next product, not a rename of the last one. The architecture documentation is public - judge it on that."

- *On lock-in*: "The process library is configurable and the APIs are documented and public. We do not consider a customer retained if they stay because leaving is hard."
- *On cloud and the regulator*: "BooX runs on-premise, hybrid or in the cloud. Which one you choose is a conversation between you and your supervisor, and we support all three."
- *On regional support*: "Asseco is a federation of local companies. In Romania you are supported by a Romanian Asseco company, under one group contract."

If the reaction turns negative:

Level	Situation	What we do	Who owns it
1	Normal questions and scepticism	Answer publicly within 4 hours, on the facts, link the docs	Social team
2	Sustained technical criticism of our claims	The architect answers in their own name within 24 hours - not in brand voice	BooX product lead
3	Accusation of misleading claims, picked up by press	Statement from Group Communication, pause paid spend on that creative	Head of Communication
4	Regulatory or client-confidentiality exposure	Full stop, Legal leads, management board informed	Management Board

We stop the campaign completely if: a claim turns out to be unsupportable, a named client objects publicly, a live BooX implementation has a publicised incident, or positive/neutral sentiment stays below 50% for seven days in a row.

9. Budget

PLN 4.8 million across the whole window. LinkedIn 40% - trade press and analysts 20% - events 15% - X 15% - community and content 10%. PLN 600,000 is held back centrally and released only once the phase-3 proof material exists.

10. What success looks like

A chief architect at a bank that has never taken an Asseco call reads our API documentation on their own, unprompted, and forwards it to their COO with the words *"this one is actually worth a meeting."*

Everything else in this brief exists to produce that sentence.

Asseco Poland S.A., ul. Olchowa 14, 35-322 Rzeszów, Poland. Internal marketing document, approved for agency and simulation use. Contains no client-confidential information.
